

ADHESIVE MIXTURE STEGU-MULTI-ELASTIK

Purpose: Mixture used for gluing wall and floors tiles (glaze and terracotta) to rigid and nondeformable bases both in interior and exterior.

Method of

Application: All bases should be properly matured, load resistant, stable and free from dust, fat and grounded with appropriate agents. Pour dry mixture slowly into container with ca. 6,0 l of clean, cool water and mix until homogeneous mass is obtained. Leave to mature for 5 min. and repeat mixing. Spread prepared mass with a toothed steel float. Place, press and mallet tiles. Adjust point width depending on the size and place of tiles. Before hardening, gauge excess material, wash tiles with water. Maximum thickness of layer – 5mm. Apply joint after 48 hours. Use at temperature range from +5°C to + 25°C!

Use: ca 1,5 – 4,9 kg/m²

Storage: In dry places, in undamaged packaging, for maximum 12 months from date of production

Warning: After mixing with water, product gives alkaline reaction. Avoid contact with skin and protect eyes. In the event of contact with eyes, wash with plenty of clean water and ask medical advice.
